

GUIDELINES FOR USING DCM 54

DCM room 54 is designated for the following two uses:

- **Ultrasound & photoacoustic imaging platform**, overseen by TBEP Senior Research Associate Yu-Qing Zhou (yq.zhou@utoronto.ca)
- **Cardiac catheterization platform**, overseen by TBEP Senior Research Associate Jenny Zhang (hangjun.zhang@utoronto.ca)

DCM room 54 contact phone number: 416-978-1737

Guidelines:

1. All users must be trained before reserving and using any equipment.
2. Because space is limited, only the devices or materials related to experiments using these two platforms can be brought in, and they should be removed after the experiments are completed.
3. Please do not store anything in the room which is not related to the above-mentioned experiments.
4. Please do not remove anything that does not belong to you without first asking for permission.
5. As the room is not well-ventilated – there is neither proper air circulation nor fume hood – please avoid using any volatile chemicals (e.g., formalin or PFA for tissue fixation, etc.) inside the room.
6. Please turn off the oxygen tanks and machine after use.
7. Please always keep the room and working surfaces tidy and clean up after use.
